- The Sub-Fund is an accumulative fund that follows a Fund-of-Funds structure.

Please refer to the “Investment Objective of ILP Sub-Fund”, and “Investment Approach of ILP Sub-Fund” sections on Page 1-2 of the AIA IFPS for further information on features of the Sub-Fund.

Investment Strategy

- The Sub-Fund aims to achieve long-term capital appreciation through a diversified portfolio of passively managed equities, fixed income, commodities, and/or cash & cash equivalents.
- Exposure to asset classes could vary over time and will be achieved primarily through Exchange-Traded Funds (ETFs), Index Funds and/or other collective investment schemes.
- The allocation to each asset class/market is based on a top-down analysis of major investment trends and macro variables. The analysis focuses on how these asset classes or markets react to economic fundamentals, relative value of and other market factors, such as central bank decisions and geopolitical events. The asset/market mix may vary depending on market conditions.

Please refer to the “Investment Objective of ILP Sub-Fund” and “Investment Approach of ILP Sub-Fund” sections on Page 1-2 of the AIA IFPS for further information.

- **You are exposed to risks of investing in equities.**
 - The value of the securities in which the Sub-Fund will invest will fluctuate depending upon the general trends of stock markets and prevailing interest rates
 - The economic environment of the countries in which the Sub-Fund invests will have an impact on the value of the securities acquired. The value of the Sub-Fund is affected by such changes in the market conditions and interest rates.

 - An increase in interest rates and/or credit risk premiums will generally reduce the value of the fixed income securities.
 - High yield bonds (normally lower rated or unrated) generally carry greater market, credit and liquidity risk

 - The Sub-Fund and the Underlying Fund are authorized to use derivative instruments from time to time. Derivative instruments are financial contracts whose values are “derived” from the value of the underlying assets.
 - While the professional use of derivatives may be beneficial to the overall investment portfolio, derivatives in themselves involve different risks which may be greater than those of more traditional investments.
- **You are exposed to tracking error risks.**
